

**HermanMiller** for Healthcare

**Storage & transport  
solutions**

Whatever, wherever and  
however you need it –  
Herman Miller's carts  
work with you

Herman Miller for Healthcare takes a research based, problem-solving approach to healthcare professionals' needs. Our goal is to improve working facilities and to solve customers' problems better than anyone else.

Our storage and transport products are made to withstand years of use without showing signs of wear and tear. With no sharp corners and easy-to-clean surfaces, they are safe and hygienic – essential when controlling infection in clinical environments. Interchangeable components save money and improve both efficiency and productivity. The breadth of our offering supports work flow and process

needs, moving with you from central storage areas to treatment rooms. Whether you are using a crash cart, a utility cart or a med/surg supply cart, we guarantee you value, lasting looks, durability, and workhorse performance. Our new mobile technology carts for point-of-care delivery provide three choices depending on your specific needs and available space.

## Futureproof and flexible

### Modularity

A modular system of carts means that sizes are universal and that drawers and accessories are interchangeable. What this delivers is a flexible and adaptable solution that expands your storage and transport capabilities. Create whatever function you need, using a specific combination of interior components and accessories. Recreate new functionality or styles by exchanging components. Universally spaced slots within the cart bodies accept the same drawers, shelves, and accessories across the entire offering. Components can even be matched with Herman Miller for Healthcare's broader offering of clinical furnishings. Standard cart sizes are 50.8cm and 60.98cm wide (and double wide) and 91.44cm, 106.68cm, and 182.88cm high. This gives you many options for targeted functions or high-capacity storage. We also make carts in additional heights and configurations for customers' special requests.

### Value

Our generous ten-year, 24/7 warranty, which includes the cost of labour and materials, strengthens the value of your initial cart purchase (mobile technology carts are covered for five years). Long-term value also means that the components you purchase can be targeted precisely, meeting your needs now and adapting to new uses in the future.

### **Durability**

All our carts are made of highly durable, impact-resistant plastic. Colour is integrated into the plastic too, so there is no colour chipping, even if surfaces are scratched. The result is a product that keeps up appearances. Drawers extend fully without wobbling or falling, increasing the efficiency of stocking and restocking. Tops are sturdy and built as part of the cart, not as a slip-on addition. Our test lab technicians put carts through rigorous tests, simulating the conditions of a fast-paced hospital environment and making sure components survive real-world use. We try tipping carts; pushing them into walls at high speeds; loading them to capacity and then making sure drawers won't fall out; testing surface strength, locks and casters; and a lot more. Rest assured: your cart is ready for a workout.

### **Cleanability and infection control**

All interior components and accessories can be removed from the cart body, making every surface accessible for cleaning, inside and out. Surfaces can be washed without danger of rusting or surface damage. Enclosed cart bodies and drawers protect supplies from contamination by dust or debris, avoiding the risk of exposure that is common in stamped and perforated metal cases. Nothing from the outside of the body through to its contents is unnecessarily exposed.

### **Ergonomic design**

Ergonomic design includes rounded corners and a softer surface material than metal, adding up to a more user-friendly product. Thoughtful details include edges and pulls that are smooth and sturdy. The cart's lighter weight and sturdy casters ease mobility and movement over door and elevator thresholds – important when quick response is essential.

### **Security**

You can specify carts with several lock options including keyed or keyless entry. Lockers come with solid or clear tambour doors that maximise the efficiency of interior storage space while keeping supplies fully secure. Drawers can also be locked, adding another level of security if needed. Our high-security locks are issued with key sets that can't be copied.

### **Service**

Our healthcare team is expert in analysing different work processes, functions and needs. Team members will work with you to determine the best layouts and product configuration so that you get the most out of different options.

# Procedure/supply carts

A variety of procedure/supply carts gives you options to match capacity, supply, and work flow to your own care and delivery processes. We also offer a cart that gives you access to drawers and contents from front or back. Security matters when protecting sensitive cart contents. Our lock options offer you assurance that supplies are intact. Procedure/supply carts are available with keyless or keyed entry, tamper indicators, wall locks and lockable doors. Carts with lock bars will lock automatically when closed and our keyless options include an alarm that sounds if the lock bar isn't shut completely.

#### **Organised for mobility**

Don't let cart design slow down your work. Our drawer organiser system lets you remove the individual bins and supplies you need and take them to where you are working. Additional overhead storage ensures faster workflow by placing supplies at eye level where they are readily available.

#### **Patient focused**

Different patients have different needs and our carts will efficiently move patient-specific supplies from pharmacy or central supply areas to patient floors and rooms.

#### **Comforting colours**

Welcome patients and families into comfortable and residential feeling environments. Our cart palette allows you to choose from many different colours.

#### **The right combinations**

Combine drawers and shelves in a number of ways to organise large and small supplies efficiently. An extra-wide cart is available to service emergency departments, with plenty of room for orthopaedic supplies.

Delivering

M8

### Plenty of room

Each catheter rack slide includes prongs, side label clips and front label holders. An extra-wide cart provides room for both catheter racks and supply storage.

### Added security

Carts can be specified with lockable doors for areas where contamination or added security is a factor. Clear doors provide an option for identifying contents quickly.

### Information access

An elevated defibrillator platform pivots to give you 360-degree visual access to the display. The raised platform keeps the defibrillator clear, frees up cart surface and avoids blocking access to drawer contents.

### Door and interior options

When security isn't an issue, curtain doors can be specified to keep supplies clean without adding weight. Wire and solid shelves provide further options as does a range of drawer, shelf and organiser components.

### Smart design

Raised edges on the surface, a keyboard shelf, front access door and ventilated CPU storage are all included. The monitor support includes a height and angle adjustable monitor arm and platform.

### Delivering medication

Good transport carts should always improve supply organisation and delivery. Our extra-wide cart is a mini pharmacy on wheels. You can deliver to specific floors or departments when stocking medication carts and a range of lock options keeps medications secure.

## L carts

L carts provide general purpose transport with a space-saving footprint for extra mobility and efficient storage. Utility carts seldom stand still: the durability of materials, caster quality and practicality all matter. A cart must perform well over many miles travelled and many different supplies delivered each day. With maintenance in mind, L carts can be cleaned in a cart

washer. Tamper indicators are an option for secure storage and carts can be outfitted with 'C' frames that hook onto the cart, holding drawers and tray/shelves. Counter tops also attach to 'C' frames, creating instant and sturdy surfaces.

### Base unit

### Coordinated aesthetics

General use carts can carry the palette or aesthetic of an individual clinical area or department.

### Magnetic interference

Specially designed carts mean that you will not experience interference with magnetic imaging equipment.

### Quick-change components

'C' frames and counter tops snap into one of four cart slots. This means you can quickly rearrange or remove components to accommodate new equipment or boxes. You can also change back again just as quickly for the next delivery.

### Drawer options

Drawers quickly transform a utility cart when you need to deliver smaller supplies. Drawer sizes further refine the function, with options for triage areas.

## Lockers

Lockers take advantage of vertical space to give you high-capacity mobile storage and a small footprint. Tambour doors are used to keep supplies secure and clean without compromising interior storage or floor space. Solid-coloured and clear doors are options and lockers can be cleaned in a cart washer.

**Rack options**

Options include three- or four-slide catheter racks. Each slide includes prongs, side label clips and front label holders.

**Visual access**

A clear door allows staff to identify interior contents quickly. Drawer labels can also be used to provide a visual reference.

**Space efficiency**

The best use of vertical space is ensured thanks to simple customisation of interiors. You can choose the most effective combination of drawers, shelves and dividers.

## The Herman Miller Jot-LIFT™

Jot-LIFT is a transport cart for laptop PCs, designed with Europe in mind. Laptops are used in European healthcare more extensively than elsewhere in the world. Restricted space is an important reason for this and the Jot-LIFT is not only stylish but also affordable and small. Its very simplicity anticipates changes in technology – when your technology changes, your carts won't have to

Jot-Lift is manufactured in the US by an Alliance Partner and distributed by Herman Miller.

The Jot offers a comprehensive range of features:

- Dynamic height adjustment with 25cm of vertical movement
- German gas spring mechanism with two linear bearings ensuring smooth, even and reliable height adjustable action
- Footplate for storage space with a comfortable footrest
- Power supply garage hidden beneath the footrest, with a range of power options and excess cable storage
- Die-cast handle for securing a cable lock to the Universal Security Slot (USS) on your laptop
- Total load capacity of 200kg

## Mobile technology

Our mobile technology carts give doctors and nurses the freedom to bring advanced technology to the bedside or anywhere else. They allow practitioners to capture data quickly and accurately, aiding better patient care at the lowest possible cost. Carts are available for laptops or monitors and CPUs. With sit-to-stand height adjustability and easy manoeuvrability, you'll find technology use easier in many different circumstances.

### Laptop ready

The laptop version doubles up as a security aid, with a work surface that locks the laptop into place. A raised edge keeps items from rolling off the cart.

### Flat panel support

The flat-panel version includes a monitor arm that swivels, tilts and adjusts in height. Ergonomic features include simple height adjustment and palm support.

### Sit or stand

Carts can be adjusted in height for sit-down work in a caregiver area and for stand-up work at a patient's bedside.

## Components

Modular components can be interchanged among your storage and transport products. Drawers, shelves and drawer organisers are available in a nearly infinite number of combinations so you can match specific needs. As your requirements change, you'll have all the flexibility needed to reconfigure and reuse components in another way. This is achieved quickly and without tools – and without adding to a store of inventory. The result is less waste and an improved ROI.

## Drawers

Looking carefully at these drawers reveals that there are no sharp corners, no perforations and a comfortable, full-length front pull. Every inch can be reached for washing. Colours are integral to the material, not painted onto the surface. Full extension drawer slides give you easy access to contents yet drawers can still be completely removed with a simple lift-and-pull for easy restocking and thorough cleaning. (Drawer-stops are available to prevent drawers from falling out.) Because drawers are interchangeable among storage and transport products, contents can be packaged and stored in sterile environments ready to be transferred when needed. This is particularly valuable when pre-stocking emergency and anaesthesia carts.

Drawers come with or without locks, lids and lockable lids so you can match a precise level of security. We offer clear and solid-coloured lids as well as frosted covers. Drawer dividers and subcontainers can be ordered in a number of kit configurations and subcontainers can also be hung on the sides of lockers. You can remove kits from the drawer for cleaning, reorganising and restocking. Carts are available in four colours and drawers in all fifteen colours, giving you a full palette of bright accents as well as warm and cool tones and neutrals.

## Shelves

Several types of shelves are also available for carts and lockers. Wire or solid shelves give you logical options for the type of supply or equipment. Solid shelves are reversible, giving you a flat surface on one side and a raised-edge surface on the other. L cart shelves also have a raised edge and a keyboard shelf and wire shelf dividers are available for procedure/supply carts.

## Cassettes

Identify and organise individualised patient supplies using pre-stocked cassettes that are interchangeable with carts and lockers. Cassettes include bins with dividers and label clips.

# Accessories

Our carts are designed to improve both productivity and comfort. Accessories for procedure/supply carts can be placed at various heights and angles above or below the cart surface, giving you the choice of where to locate supplies. Everything is simple to readjust when you require different options. Some accessories attach firmly to a rail and

can be removed quickly for cleaning or supply replacement. Among your options is a suture basket that lets you pull out individual suture packs from a box without having to remove the entire box. You can also order a rail clamp that lets you attach specific equipment to a cart. Several different accessories are available for the mobile computer cart.
